

## Media release

Glattpark (Opfikon), 19 September 2024

---

### **Wincasa's company fleet is going electric and digital**

**Wincasa is introducing another sustainability measure: its new company vehicle fleet is entirely electric, can be booked digitally and is available to employees outside working hours at attractive prices, including for personal use. Wincasa has partnered with Urban Connect for its vehicle fleet operations.**

Wincasa is rolling out the concept throughout Switzerland to build its profile with sustainable, digital and shared company mobility. The fleet is provided by Urban Connect, the leading Swiss company for commercial mobility solutions, as partner to Wincasa. Since August 2024, Urban Connect has made a company fleet available to Wincasa that will grow to 46 electric vehicles and 23 e-bikes/e-scooters by 2026.

Wincasa will offer its employees at 18 locations throughout Switzerland an attractive, electric mobility concept that can be booked via an app. This new solution will result in a reduction in the carbon emissions of Wincasa's fleet of vehicles and enable its employees to borrow attractive e-vehicles at affordable rates, including for personal use.

Philipp Schoch, Head of Management for Wincasa, explains: "Our experience with the electrified company fleet during the pilot phase was very good. The digital, comprehensive solution from Urban Connect won us over. Now we are ready to roll out this new mobility concept to all of our Swiss locations. Our partnership with Urban Connect enables us to meet our targets related to employee mobility, reduces our fleet emissions and gives us full transparency on our electrified fleet at all times."

Judith Häberli, Co-Founder of Urban Connect, adds: "We are delighted that our partnership with Wincasa is helping us to further electrify, digitalise and optimise the Swiss mobility landscape."
